# ECI 1119, EQI 1131

Rotary encoders for absolute position values with safe singleturn information

- Robust inductive scanning principle
- Mounting-compatible with photoelectric rotary encoders with a 75A stator coupling
- 70C mounting flange
- Blind hollow shaft (Ø 6 mm) for axial clamping without a positive-locking element (82A) or with a positive-locking element (1KA)
- Required mating dimensions with a M3x25 central screw and cost optimization for the customer side upon request

## Required mating dimensions

- = Bearing of mating shaft
- M1 = Measuring point for operating temperature
- M2 = Measuring point for vibration
- 1 = Contact surface of slot
- 2 = Chamfer at start of thread is mandatory for material bonding anti-rotation lock
- 3 = Shaft surface; ensure full-surface contact!
- 4 = Slot required only for ECN/EQN and ECI/EQI with WELLA1 = 1KA
- 5 = ECI/EQI flange surface; ensure full-surface contact!
- 6 = ECN/EQN coupling surface
- 7 = Maximum permissible deviation between the shaft surface and coupling surface; compensation of mounting tolerances and thermal expansion, of which ±0.15 mm of dynamic axial motion is permitted (ECN/EQN)
- 8 = Mounting dimension: maximum permissible deviation between the shaft surface and flange surface; compensation of mounting tolerances and thermal expansion; dynamic motion permitted over entire range (ECI/EBI/EQI)
- 9 = ECI/EBI flange surface; ensure full-surface contact!
- 10 = Undercut
- 11 = Possible centering hole
- 12 = Distance to cover; note the opening for header, header connector, and wires
- 13 = Screw: ISO 4762 – M3x10 – 8.8 – MKL; tightening torque: 1 Nm ±0.1 Nm
- 14 = Screw: ISO 4762 – M3x25 – 8.8 – MKL; tightening torque: 1 Nm ±0.1 Nm
- 15 = Positive-locking element; ensure correct engagement in the slot (e.g., by measuring the device overhang)
- 16 = Direction of shaft rotation for ascending position values
- 17 = 15-pin header
- 18 = Dimension for JH standard cable

mm

# Mounting

The blind hollow shaft of the rotary encoder is seated onto the measured shaft and fastened with a central screw. It is particularly important to ensure that the positive-locking element of the 1KA rotary encoder shaft securely engages the corresponding slot in the measured shaft. The stator is positioned for mounting via a centering diameter and fastened with two mounting screws. Use screws with material bonding anti-rotation lock (see *Mounting accessories*).

## Further information:

For the customer-side mounting design, aluminum and steel are permissible materials for the customer-side shaft and stator.

In addition, comply with the material specifications and other material characteristics in the *Encoders for Servo Drives* brochure (ID 208922-xx).

# Integrated temperature evaluation

This rotary encoder features a temperature sensor integrated into the encoder electronics and an evaluation circuit for an external temperature sensor. In both cases, the respective digitized temperature value is transmitted purely serially via the EnDat protocol. Please bear in mind that neither the temperature measurement nor the transmission of the temperature value is safe in terms of functional safety. With regard to the internal temperature sensor (FID 0x21 SENSOR\_TEMP\_INT), the rotary encoder supports the two-stage cascaded signaling of a temperature exceedance. It consists of an EnDat warning and an EnDat error message. In compliance with the EnDat specification, when the temperature reaches the warning threshold for temperature exceedance of the internal temperature sensor, an EnDat warning is issued (HPF.STATUS.W "collective warning bit"). In addition, bit 26 (W10) "Temperature warning threshold exceeded" is set in the LPF with the FID=ERRMSG. This warning threshold for the internal temperature sensor is stored in the parameter SET.tempWarnLevel and can be individually adjusted. A device-specific default value is saved here before shipping. The temperature measured by the internal temperature sensor is higher by a device-specific and application-specific amount than the temperature at measuring point M1, as shown in the dimension drawing.

The encoder features a further, albeit non-adjustable trigger threshold for the EnDat error message (HPF.STATUS.F "collective error bit"). In addition, bit 8 (A8) "Permissible ambient conditions exceeded" is set in the LPF with the FID=ERRMSG. This trigger threshold may vary depending on the encoder model and is stated in the specifications. HEIDENHAIN recommends adjusting the warning threshold based on the application such that this threshold is sufficiently below the trigger threshold for the "Temperature exceeded" EnDat error message. Fulfillment of the encoder's intended use requires adherence to the operating temperature at measuring point M1.

## Mounting accessories

### Screws

Screws (central screw, mounting screws) are not included in delivery. They can be ordered separately.

ECN 1119/EQN 1131	Screws <sup>1)</sup>		Quantity
<b>Central screw</b> for shaft fastening	ISO 4762- <b>M3×25-8.8-MKL</b>	ID 202264-86	10 or 100
<b>Fastening screw</b> for flange	ISO 4762- <b>M3×10-8.8-MKL</b>	ID 202264-87	20 or 200

<sup>1)</sup> With coating for material bonding anti-rotation lock

Please note the information on screws from HEIDENHAIN in the *Encoders for Servo Drives* brochure, under *Screws with material bonding anti-rotation lock* in the chapter *General mechanical information*.

### Mounting aid

To avoid damage to the cable, use the mounting aid to connect and disconnect the cable assembly. Apply pulling force only to the connector of the cable assembly and not to the wires.

ID 1075573-01

### Mounting aid

For turning the encoder shaft from the rear. This facilitates finding the positive-locking connection between the encoder and the measured shaft.

ID 821017-03

### EnDat 3 adapter

Adapter for connecting an encoder with EnDat 3 (E30-R2) to the PWM 21

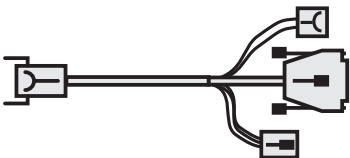

ID 1317260-01

**For further mounting information and mounting aids, please refer to the relevant mounting instructions and the *Encoders for Servo Drives* brochure. The mounting arrangement can be checked with the PWM 21 and ATS software. For selection of the software, please contact HEIDENHAIN.**
